COMPOSITE TERRACES

# GARDIN PREMIUM BY SILVA

Board Full of Advantages

**Looking for something both elegant and durable? Here's a solid WPC board, made in France, crafted using advanced co-extrusion technology with an enhanced polymer layer surrounding the board's core. Gardin Premium by Silva meets even the most demanding conditions and refined tastes.**

Its solid construction makes it perfect for both private residences and high-traffic commercial projects. The board has achieved a BROOF fire resistance rating and the highest anti-slip class, making it ideal for use around pools and on footbridges. Thanks to its luxurious shading effect, natural light reveals new hues throughout the day. Enjoy its beauty as you sip your morning coffee on the terrace.

# GARDIN DECO X

Quality and Appearance to the Power of X

The new DECO X collection is the third generation of Co-EX WPC composites, combining the durability of intense colour with a realistically crafted texture on both sides. Thanks to a meticulous 9-step production process and the use of carefully selected components, we've created our most advanced decking product yet. A new level of quality for your terrace.

These multi-coloured structured boards feature high-quality components, crafted with Austrian precision and quality standards. Thousands of tests led to a formula that absorbs less water while retaining its vibrant colour. The multi-dimensional texture is designed to minimise the appearance of everyday wear and tear. On one side, a realistic wood grain pattern; on the other, a modern brushed finish. Experience the ultimate strength of the X-SHIELD surface!

# GARDIN DECO 2.0

Refined in Every Detail

**The new DECO 2.0 collection is the second generation of WPC Co-EX composites. It combines the durability of vibrant colour with a deeper texture and even better components. Better components, improved appearance, Austrian quality.**

This proven design offers enhanced colour durability and increased resistance to tough stains. Crafted with Austrian precision, the enhanced quality is evident not only in the authentic wood grain replication but also in the modified pigment formula that increased resistance to staining and UV fading. The deeper texture and new Oak Winchester/Maple colour variant provide a sophisticated finish. Installed with Gardin Premium clips for easy assembly.

# GARDIN NATUR

Naturally Striking

**A durable construction adorned with wood-like patterns. The realistic surface is the result of innovative 3D technology and the blending of pigments. The patented extrusion method forms a harder, deeper texture with slip-resistant qualities. Pleasant to the touch and budget-friendly.**

Gardin Natur combines the practical benefits of composite boards with the aesthetic appeal of wooden decks. Its realistic grain patterns are inspired by natural wood. It offers high mechanical and biological durability. A waxed surface simplifies maintenance.

**Choose between wood grain or grooved finish.**

# GARDIN PLUS 2.0

Quality with a Plus

**Ideal for those who appreciate convenience of use and easy installation. What sets these boards apart is their 6-chamber construction with thick walls. They combine optimal technical properties, long-lasting colour, and dimensional stability.**

A board with a robust construction, perfect geometry, and great appearance. Its grooved surface significantly improves water drainage and enhances safety during use. An impressive and proven decking system solution, long popular in Western Europe and the USA.

**Choose between fine or coarse grooving for your preferred surface finish.**

# SILVADEC ELEGANCE

Solid Boards, Solid Satisfaction

**Silvadec is the first and largest company in Europe specializing in the production of composite wood. Elegance features solid, anti-slip decking boards. They are free of chambers, which prevents water accumulation within them. This results in increased resistance to damage and adverse weather conditions.**

Using advanced German-French production technology and a keen focus on quality components, Silvadec has achieved twice the stability of most composite decking on the market. As a result, the 180 mm wide and 6-meter long boards can be confidently recommended and used without hesitation.

The boards consist of 2/3 natural wood flour and 1/3 high-density polyethylene. The high proportion of natural wood in the composition reduces heat absorption during summer, while the mass colouring allows for sanding down any scratches or surface damage.

# SILVADEC ATMOSPHERE

Great Atmosphere for Years

**Elegant and durable co-extruded solid decking boards. The co-extruded construction means that the core of the boards is surrounded by a blend of high-performance polymers. As a result, the boards offer high resistance to UV radiation, fading, stains, and dirt.**

A unique feature of this collection is its tasteful shading, which looks particularly impressive on larger surfaces. The SILVADEC ATMOSPHERE collection, like ELEGANCE, can be used around pools due to its excellent anti-slip properties (R12-R13) and low heat retention. Silvadec prides itself on achieving a carbon footprint level of 12.9 kg, significantly lower than the average level of 63.5 kg found for other WPC composite decking produced globally, 22.4 kg for WPC boards produced in Germany, and 48.5 kg for ceramic decking and flooring.

JAF Polska Sp. z o.o. declares that the profiled/grooved board is not intended for permanent installation in building structures and, therefore, is not a construction product within the meaning of Regulation No. 305/2011. The profiled/grooved board is a general-purpose wooden product intended for use in gardens and other areas where building permits are not required, such as benches, planters, fences, platforms that are not permanently attached to the ground or buildings, etc. The board is made of natural wood, and no chemicals have been used in its production that would alter its composition or properties in a way that could harm humans or the environment. The profiled/grooved board is a semi-finished product intended for further processing (sawing, sanding, finishing, etc.).
